Craniofacial defects such as cleft lip and palate are among the most common of all birth defects. They can occur as an isolated condition, or may be one component of an inherited disease or syndrome. Although clefts can be repaired to varying degrees with surgery, researchers are working to understand the developmental processes that lead to clefting and how to prevent the condition or treat it more effectively.

Race is one factor that influences the likelihood of developing the birth defect. Cleft lip and palate are most common in American Indian and Asian children. Black children are least likely to have a cleft. Other factors that may contribute to a baby developing a cleft lip and/or palate include family history, exposure to drugs or alcohol while in the womb and the mother being obese during pregnancy.

While in many cases clefts cannot be prevented, expectant mothers can lower the risk of their baby developing a cleft lip or palate through exercise, taking prenatal vitamins, and refraining from cigarettes and alcohol while pregnant.

**DID YOU KNOW**

After congenital heart defects, cleft lips and palates are the most common birth defect, affecting about one in 700 babies born in the United States.
Summer Exercise Safety Tips

While regular exercise is essential for good health, it’s only beneficial if done safely. Follow these precautions to eliminate the danger in warm weather workouts.

**Stay hydrated.** Drink water before, during and after exercising. Experts recommend drinking 20 ounces of water before exercising and eight ounces after finishing your workout, with water breaks every 15 to 20 minutes while exercising.

**Choose the right clothing.** Wear loose-fitting clothes to allow circulation of air between your skin and the environment.

**Wear sunscreen.** Apply sunscreen with an SPF of at least 15 half an hour before exercising.

**Moderate your pace.** If it’s hotter than usual, cut back on your pace or exposure time. Don’t try to set personal records during the hottest time of the year.

Grow Your Own Vegetable Garden

Gardening might be the best hobby out there. Growing your own garden is a great way to be active, eat healthy and save money all at once. Whether you’re a novice or a seasoned gardener, here are some tips to help supercharge your growing power:

**Keep it small.** Start small so you don’t overwhelm yourself with gardening tasks and growing cycles, and also so you don’t end up wasting food by growing more than you need.

**Grow for variety.** Homogenous gardens are more susceptible to insects and disease than gardens with a variety of plants. Keep in mind that vegetables such as tomatoes, peppers and squash keep providing throughout the season, but other vegetables, such as carrots, radishes and corn, produce only once.

**Decide where to grow.** The perfect spot for your garden will have good soil, be close to a source of water and receive six to eight hours of direct sunlight every day. This can be accomplished on a porch with a growbox or separate containers if you’re working without a yard. A well-tended 10-by-10 garden will usually produce more than a weed-filled or disease-ridden 25-by-50 bed.

**Start composting.** Compost piles provide excellent nutrients for your garden soil, and because they can be made of grass clippings or discarded fruits and vegetable material, they are completely free.

**Make it visible.** Keep your garden in a place where it will be seen. It’s easier to appreciate and remember that your garden needs tending if you plant next to your front porch, rather than tucked away somewhere in the backyard.

Couscous Salad

Couscous is made of tiny grains of pasta and is a staple of North African cooking. It combines well with dried cherries in this high-fiber salad, which can be served as a great accompaniment to pork, lamb or poultry.

1 cup water
¾ cup couscous
½ cup dried tart cherries
½ cup coarsely chopped carrots
½ cup chopped cucumber
¼ cup sliced green onions
¼ cup toasted slivered almonds
3 tbsp. balsamic vinegar
1 tbsp. olive oil
1 tbsp. Dijon-style mustard
Salt and pepper to taste

In a medium saucepan, bring water to a boil. Add couscous and remove from heat. Let stand, covered, for 5 minutes before fluffing couscous with a fork. Put cooked couscous, dried cherries, carrots, cucumbers, green onions and almonds in a large mixing bowl and mix well. In a separate bowl, combine vinegar, olive oil and mustard; mix well. Pour over couscous, stirring to coat all ingredients. Season with salt and pepper. Serve chilled or at room temperature.

Yield: 6 servings. Each serving provides 190 calories, 1g of fat, 0mg of cholesterol, 28mg of sodium and 9g of fiber.
